Where “insert existing component” opens non-CATIA data in a CATIA V5 session

“Multi-CAx Data Access”

■ Theorem Multi-CAx interoperability solutions: UGNX plug in, Pro/E plug in, I-DEAS plug in

Design in context for the CATIA V5 user

- From within CATIA V5 select non CATIA V5 parts or assemblies. Use “insert existing component” to bring them into the CATIA V5 workspace
- CATIA V5 maintains and manages links with the inserted non CATIA parts or assemblies
- Enables update to be performed if the non CATIA V5 files or assemblies are modified

Targets

- All CATIA V5 users in mechanical design and manufacturing where design collaboration with UGNX - Pro/E - I-DEAS is required

Customer Benefits

- Easy use within CATIA V5 saves time
- Update synchronizes with non CATIA parts and thereby ensures accuracy of CATIA V5 design
