

GLOBAL PRODUCTION SYSTEM PLANNING

Datasheet

DEFINE SUPPLY CHAIN NETWORKS AND LOGISTICS RELATIONS WITH V6 PLANNING:

DELMIA GLOBAL PRODUCTION SYSTEM PLANNING PROVIDES A SINGLE DATA REPOSITORY FOR ALL ACTIVITIES IN THE ENTERPRISE'S PHYSICAL SUPPLY CHAIN NETWORK.

With DELMIA Global Production System Planning (SPG), users can optimize the performance of their global production system, ensure planning integrity from the supply chain network to individual machines on the shop floor, and increase manufacturing decision support accuracy at all levels of the enterprise.

Isolated plants can be integrated into a coordinated network. Users can look at what-if scenarios for dealing with new orders, new products, or supply chain disruptions. Coupled with the ability to evaluate alternatives, this is a significant breakthrough in manufacturing decision support accuracy.

OPTIMIZE GLOBAL PRODUCTION SYSTEM PERFORMANCE

Integrate plants into a coordinated operations network and manage global production instead of isolated plants. Optimize performance of the global production system by managing capabilities rather than local capacities.

ENSURE DIGITAL ASSET CONTINUITY BETWEEN PRODUCTION AND PHYSICAL SUPPLY CHAIN PLANNING

Digital asset continuity can be achieved by institutionalizing and digitizing all manufacturing capabilities across the physical supply chain. The enterprise can ensure local production compliance with centrally defined production processes. This standardization extends to all manufacturing capabilities, from the supply chain network to detailed machine level, with all data residing in a common corporate repository.

INCREASE MANUFACTURING DECISION SUPPORT ACCURACY

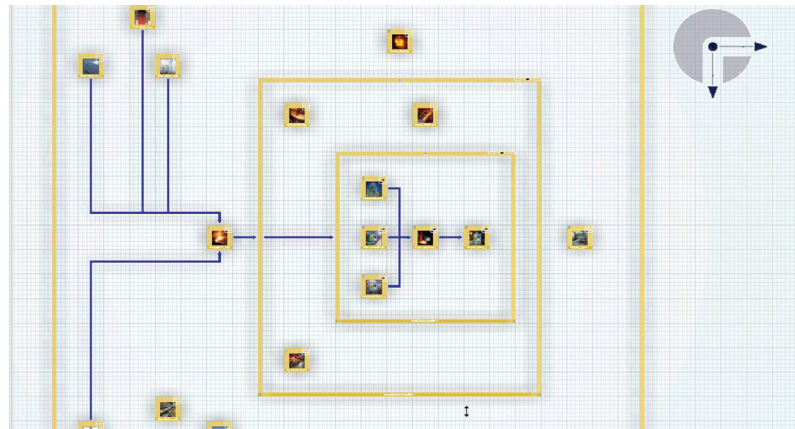

Look at what-if scenarios that show the best way to deal with new orders, new product introductions or supply chain disruptions. They can increase their understanding of these alternatives during supply chain planning. When planning plant processes, they can account for physical supply chain constraints.

PRODUCT HIGHLIGHTS

- Define a supply chain network and manage the lifecycle of the links
- Define transportation systems and logistical flow
- Navigate with a sourcing table
- Filter supply network data based on specific interest
- Manage the Supply Lifecycle

Integrate isolated plants into a coordinated network.

Define supply chain networks and logistics relations.

About Dassault Systèmes

Dassault Systèmes, the 3DEXPERIENCE Company, provides business and people with virtual universes to imagine sustainable innovations. Its world-leading solutions transform the way products are designed, produced, and supported. Dassault Systèmes' collaborative solutions foster social innovation, expanding possibilities for the virtual world to improve the real world. The group brings value to over 150,000 customers of all sizes, in all industries, in more than 80 countries. For more information, visit www.3ds.com.

The 3DS logo, CATIA, SOLIDWORKS, SIMULIA, DELMIA, ENOVIA, GEOVIA, EXALEAD, NETVIBES, 3DSWYM and 3DVIA are either trademarks or registered trademarks of Dassault Systèmes or its subsidiaries in the US and/or other countries.
