

CIDEON SOFTWARE

“Engineering Software”

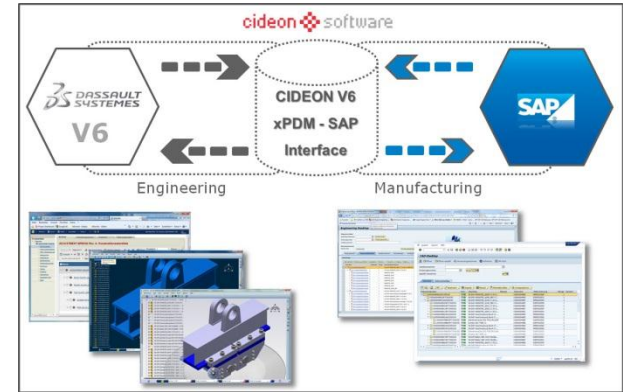

► CIDEON V6 xPDM - SAP Interface

Asynchronous and bidirectional interface between V6 and SAP

- ENOVIA V6 – SAP integration based on Dassault Systemes xPDM Framework
- Completely automatic synchronization of data and processes
- Mapping of the V6 data to SAP, mapping of the SAP data in V6
- Can be triggered automatically (no user interaction needed) or via the end-user
- Provides necessary information for planning, design, production, maintenance and administration to V6 and SAP users in their familiar system environment
- Avoids double data input. Integrated release processes between ENOVIA V6 and SAP
- Support of important PLM functionalities in the Dassault Systemes environment such as parts and BOM management in V6 Engineering Central and V6-VPM (CATIA-V6).
- On the SAP side, objects in Materials Management, such as Materials, Bills of Material with associated Change Master Records, Documents and Bills of Documents, including status and maturity are supported.
