

All of our data is in one place, eliminating islands of information that were previously dispersed in different databases, and which were not in sync with each other or necessarily up to date.

Leif Sundin, Applications and Process Development, MacGregor

MacGregor Cranes thinks PLM with ENOVIA V6

In order to deal with a sharp rise in orders and to take advantage of after-sales service opportunities, MacGregor Cranes needed to increase efficiencies and streamline processes. ENOVIA V6 helps improve data management and provide employees and partners with secure access to information, resulting in better collaboration, workflow management, and role-based access.

MacGregor Cranes produces a wide variety of cranes, some of which can lift up to 450 tons. “We propose both standard cranes with predefined configurations and tailor-made cranes based on customer specifications,” said Leif Sundin, Applications and process development specialist, MacGregor. “Our emphasis on product quality makes MacGregor cranes the Rolls Royce of cranes.”

A SHARP RISE IN ORDERS

In 2007, MacGregor Cranes experienced tremendous growth in customer demand for its cranes resulting in a sharp increase in orders. Sundin said, “This

jump was partially due to the fact that ship owners who had been holding back on replacing aging ships were ready to make the necessary investments.” The company quickly realized that it would have to

GLOBAL SERVICE NETWORK

improve its customer responsiveness or risk losing credibility. “The increase put a strain on our way of working,” said Sundin. “We knew that we would have to improve our processes if we were to efficiently deal with the growth we were experiencing at the time.”

MacGregor’s cranes have an average lifespan of 20 years, and the aftermarket for parts and service is an important growth driver for the company. “We have a service network that is worldwide, which distinguishes us from our competitors,” declared Sundin. “The high potential of this business requires that we make our service organization more productive and reactive to customer needs.”

To increase that reactivity, MacGregor wanted to deliver more information from its new sales business lines to the after-sales organization, and to do so in a more streamlined fashion. “We can increase the efficiency of our service network by giving it easy access to detailed information on each customer’s product configuration,” explained Sundin. “With the BOM being the core of a product’s definition, giving them access to it would increase service quality and reactivity.”

ENOVIA V6 – SAP INTEGRATION

A MatrixOne user since 1998 for document management, MacGregor implemented ENOVIA V6 in 2009 to revamp its business processes and improve data management. Today, ENOVIA V6 is integrated with SAP, MacGregor’s ERP system. ENOVIA V6 enables global access to all product information and supports MacGregor’s product development processes from concept engineering designs to after sales and services. “ENOVIA V6 and SAP is an excellent combination,” said Sundin. “Parts are created in the PLM environment and assigned part numbers and other related information by SAP.”

EXTENDED ACCESS TO INFORMATION

ENOVIA V6 information is accessed by MacGregor’s employees in Sweden, China and Korea. With production based in Asia, the company soon plans to extend this access to its production partners. “As opposed to sending drawings by email, as was previously the case, our production partners can access the system and retrieve the information they need using a role-based access approach while preserving the security of our network and information,” commented Sundin.

SINGLE VERSION OF THE TRUTH

Sundin sees a number of benefits to using ENOVIA V6 PLM. “All of our data is in one place, eliminating islands of information that were previously dispersed in different databases, and which were not in sync

with each other or necessarily up to date. Users find it easier to locate the information using the ‘where used’ functionality and by navigating through the relationships in the data model.”

MACGREGOR NOW THINKS PLM

ENOVIA V6 has prompted a mini-cultural revolution at MacGregor by helping transform the company’s approach into a PLM way of thinking. “We are putting more controls in our processes, for example in how we manage engineering changes,” said Sundin. “We now have workflows to make sure that everything is done in the right way and that the data goes to the right person for processing. There’s traceability and we can literally visualize our processes.”

Technia

Technia is a world-class supplier of Product Lifecycle Management (PLM) solutions for the creation and management of product information throughout the entire product lifecycle. Technia has about 200 employees and is a part of the Addnode group (listed at the OMX Nordic List, Small Cap). The company is a strategic partner

to more than 200 Nordic companies and has offices in Sweden, Finland, Norway and North America. Technia’s customer list includes: Ericsson, Electrolux, Forsmark, GE Healthcare, Haglöfs, Metso Paper, Mölnlycke Health Care, Nokia, Oticon, Scania, Sectra Mamea, Skanska, Sony Ericsson and SSAB.
