BIOVIA Samples is a web-based application to manage the creation, receipt, collection, labeling, splitting, and disposal of samples within the lab. It integrates with other BIOVIA Unified Lab Management applications such as BIOVIA Compose, BIOVIA Capture, BIOVIA Task Plan, BIOVIA Workbook and BIOVIA Notebook.
LABORATORY SAMPLE MANAGEMENT
Across all analytical labs, most processes revolve around working with samples. However, as the variety of processes and sample types continues to increase, effectively managing those samples and their related data becomes more and more complex. Tracking samples through the lab, managing the hierarchy between parent and aliquoted samples, assigning samples to procedures, and tracing the results while keeping everything in sync makes for time-consuming and complex daily workflows.

BIOVIA Samples is a web-based application that manages all aspects of sample data within the BIOVIA Unified Lab Management suite of applications, making it easy for scientists to keep track of their lab samples and manage the flow of information.

WORKING WITH BIOVIA SAMPLES
With BIOVIA Samples, it is easy to manage sample information throughout the lifecycle of a sample in the lab.

• Create samples with auto-generated or customized names
• Print appropriate sample labels
• Group related samples together
• Split (aliquot) samples and specify handling and storage conditions
• Mark samples as received or collected
• Execute planned tests for samples, and enter results through integration with BIOVIA Capture
• Mark samples for disposal

Once a sample is created within the BIOVIA Samples app, it can be assigned a testing workflow and lab location/destination parameters, and the optional features for assigning/managing analytical procedures then become active.

Lab staff can easily manage samples individually or as groups, printing new labels, marking samples as received, adjusting their status, or marking them for disposal. The sample ID can be generated automatically, input as a custom value, or imported from other systems like from SAP. The integrated calendar function can be used to define when a sample (or sample set) is collected. The sample’s Chain of Custody can be viewed to track its whereabouts including who handled it, where it went, and under what storage conditions it was kept for different time periods.

BIOVIA SAMPLES INTEGRATION
BIOVIA Samples provides a centralized method of managing samples for all of BIOVIA’s Unified Lab Management applications. Samples can be created within BIOVIA Workbook, and the sample information synced back to Workbook for complete traceability. Sample information can be sourced from systems such as SAP, and results sent back to complete a Certificate of Analysis. Sample information for Standards, Blanks and Unknown samples can be sent to a chromatographic data system (CDS) to create an injection sequence, and then sample results automatically retrieved from the CDS and linked to each sample.

BIOVIA Samples also integrates with the BIOVIA Task Plan, BIOVIA Compose, BIOVIA Capture, BIOVIA Notebook and BIOVIA CISPro applications, so that sample management is seamless across the apps to improve documentation efficiency, ensure compliant procedure documentation and reduce manual transcription errors.

BENEFITS OF BIOVIA SAMPLES

• Improve consistency of sample tracking and data management across different labs
• Increase lab efficiency through centralized sample management and transfer from other systems
• Reduce the risk of manual transcription errors in sample labeling and data collection
• Ensure compliant sample procedure documentation related to all samples in the lab

BIOVIA Samples is part of BIOVIA’s larger Unified Lab Management offering, with a comprehensive set of lab informatics capabilities for lab planning and scheduling, resource and recipe management, lab execution and reporting and analytics.
Our 3DEXPERIENCE® platform powers our brand applications, serving 12 industries, and provides a rich portfolio of industry solution experiences.

Dassault Systèmes, the 3DEXPERIENCE® Company, provides business and people with virtual universes to imagine sustainable innovations. Its world-leading solutions transform the way products are designed, produced, and supported. Dassault Systèmes’ collaborative solutions foster social innovation, expanding possibilities for the virtual world to improve the real world. The group brings value to over 210,000 customers of all sizes in all industries in more than 140 countries. For more information, visit [www.3ds.com](http://www.3ds.com).
