SUMMARY

We are proud to offer a variety of courses to meet your organization's needs, ranging from navigation basics to advanced technical courses. Customized courses can be designed to meet your organization's specific needs. For more information on customization, please contact your Account Manager.

Delivery Methods:

- **Instructor-Led Training:** Facilitated by an instructor, this training takes place at your location or through a virtual classroom. Onsite courses offer hands-on exercises to enhance the learning experience. In remote classes, hands-on exercises are assigned as homework, rather than during class time.

INSTRUCTOR-LED COURSES

SCIENCECLOUD PROJECT DATA REGISTRATION

ScienceCloud is presented in a web portal that provides a secure and intuitive data handling system where authorized users can collaborate, view results, and make decisions. In this course, researchers will learn how to access their teams, switch between different teams, browse through different projects within a team. All the different methods used for registering both chemical and biological data will be described. Additionally, users will learn how to include chemical structures and information while registering data, search for registered entities, obtain information regarding an entity and generate reports based on query results.
