Virtual Class Agenda

Warehouse Management System (Advanced)

This is a three day hands-on course in which the user will be introduced to how to utilize the DELMIAworks Advanced Warehouse Management System features. The course is taught using the Ataman-based IQRF system (the Apache-based IQWMS system is not compatible with the Advanced WMS features). Topics covered will include understanding the difference between regular and advanced WMS, additional required system setup and configuration, user profile settings, warehouse transactions, and shipping transactions.

This class assumes that attendees already have a working knowledge of the basic WMS system and thus focuses only on the additional setup and functionality added in with the introduction of the Advanced WMS license purchase. For attendees who are knew to working with the DELMIAworks Warehouse Management System, please see the separate "Combined" class agenda that is a full 5 days and includes a more comprehensive overview of the full WMS functionality.

Who should attend?
- System Analyst, Warehouse managers
- Key managers or personnel responsible for production control, inventory, and materials management

Prerequisites
- Working experience in the DELMIAworks system (recommended)
- Familiarity with your companies material handling procedures
- Working knowledge of basic WMS is required

Learning Objectives
- Understand the difference between regular and advanced WMS
- System setup and configuration for advanced functionality
- Configure and manage user profile settings
- Perform various different types of transactions

Licensing
The functionality covered in this class is not included with the core DELMIAworks software package. Specific user licenses must be purchased for each WMS user. The Advanced Warehouse Management system is considered an add-on module and purchased separately.
