

SmartTeam Design Express for Multi-CAD:

A Solid Foundation for Collaboration

PLM is no longer for mega-manufacturers alone. SmarTeam Design Express lets you start off right, with out-of-the-box, optimized collaborative product design, and then expand to full PLM at your own pace, as your company and processes evolve.

Your company is judged by its products. That's why your designers use powerful 3D CAD tools to create great products, often comprised of complex assemblies and numerous parts. With market demand leading to the development of ever more products, models and configurations, your team has accumulated a huge body of linked digital data. If accessed and modified inaccurately, this data can become a management headache and lead to errors and expensive delays.

SmarTeam Design Express (SDE) from ENOVIA Smarteam is a comprehensive, secure, easy-to-use entry PLM solution for sharing product information, managing data and implementing collaborative design. SDE enhances your product creation process by providing pre-configured data management templates and a proven methodology for improved collaboration around existing product knowledge. ENOVIA SmarTeam's robust, embedded CAD integrations let your designers work in their everyday CAD environments while benefiting from controlled lifecycle management on a single, accurate version of product information.

Core Benefits

- Low cost; rapid return on investment
- Best-in-class, immersive CAD integrations
- Robust data model and methodology tailored for collaborative design
- 10-day smooth, simple, «quick start» implementation and training
- The only solution with a built-in scalable, customizable upgrade path

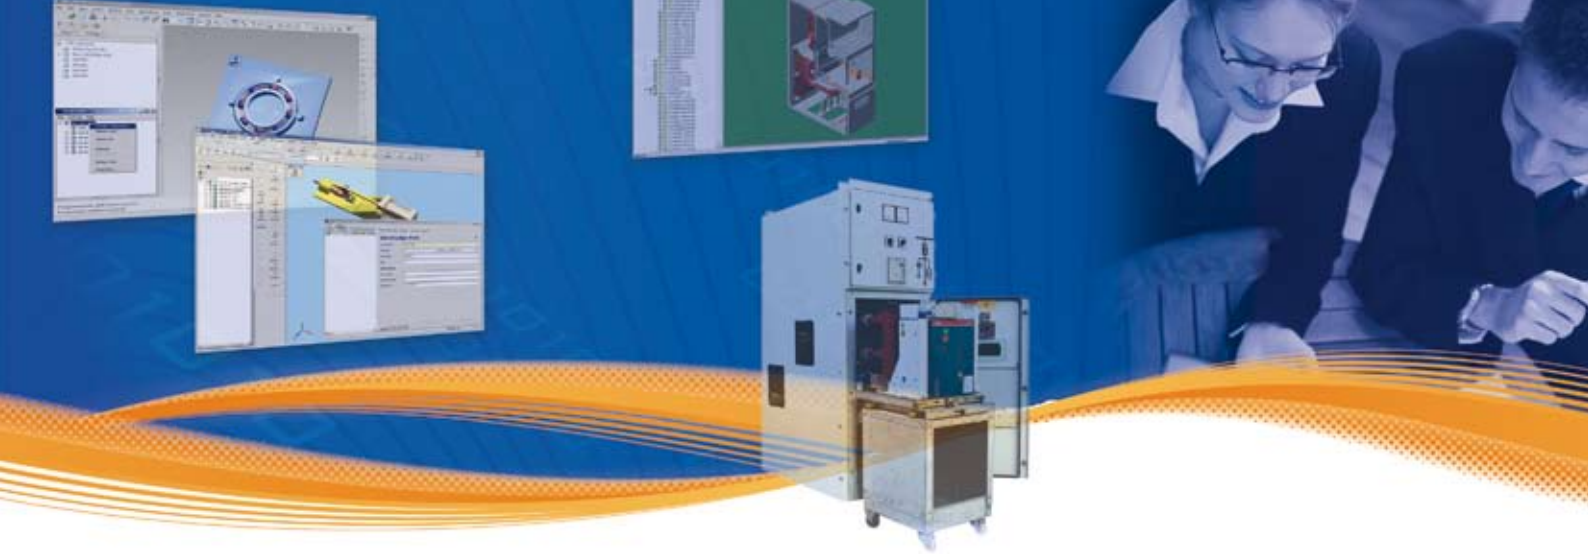

Created to promote secure, efficient collaboration and knowledge reuse across design and engineering teams, SDE saves time, prevents errors and protects your investment. While using SmarTeam Design Express to collaborate effectively, you are gaining experience and building a data management foundation for easily and smoothly expanding to a fuller PLM scenario.

SmarTeam Design Express improves performance and productivity with:

- Industry-leading, immersive CAD integrations for SolidWorks®, Autodesk® Inventor™, Solid Edge® and Pro/ENGINEER™
- A robust data model tailored for collaborative CAD design and related product data management (PDM), with pre-configured profile cards, queries and wizards
- Uniform storage, structuring and securing of product data
- Powerful data search mechanisms
- Collaborative lifecycle tracking, version control and revision management
- Support for standard parts, design and part reuse
- Viewing support for over 450 file formats (.dwg, .sldprt, .par, .ipt, .tif, .xls, .pdf, etc.)
- Secure, single-server management; automated back-up procedures
- Exceptional ease-of-use

SDE's 10-day implementation guarantee:

SDE is a low-cost, out-of-the-box solution that enables full implementation with your existing CAD data within 10 days. The comprehensive package, combining a predefined database, "quick start" software, a best practice scenario and dedicated training materials, lets your team get up and running quickly and smoothly.

SDE's pre-configured data model has been designed for "plug & play" use within your company; the only customization required is to add user names and install the relevant working directories.

Keeping Pace with Your Growth

SDE's "quick start" is designed to give you full product data management benefits with minimal disruption to your day-to-day operations. Once you've experienced the power of SDE, you'll want more.

SDE is the only PDM solution that includes a built-in upgrade path, scaling smoothly to support your growing enterprise. Once your company has optimized its product IP within the SmarTeam database, you can easily add PLM functionality when you are ready. You choose how and when to extend your Product Lifecycle Management scenario:

- Enhancing design methodology according to company-specific needs
- Automating product data and business processes such as BOM and engineering change management organization-wide
- Bridging from engineering to manufacturing and other key enterprise applications
- Linking design management to your supply chain

Start Small, Aim High!

Analysts say that mid-size manufacturers must invest in PLM to stay competitive. How can you best ensure return on this investment? ...by starting with a global system of record and collaborative product design solution that combines pre-defined templates, best practice processes, and a gradual, phased approach. SmarTeam Design Express leads you along the road to PLM success, delivering rapid results and long-term strategic value.

"Designing with a SolidWorks® parametric solid modeling system produces orders of magnitude more information and greater numbers of files that are linked. These files absolutely must be kept in sync for the design to come together properly, and ...to collaborate effectively.

The only practical way to deliver those capabilities is with PLM. It's a no-brainer."

**- Paul Sikir, Director of Design Engineering,
Sub-Zero Freezer Co., USA**

"We need a powerful PDM System for structured management of our Autodesk® Inventor™ and related data and for collaboration between engineers. USK selected SmarTeam because of its Multi-CAD capability... Another selection criteria has been that SmarTeam can be implemented for basic drawing management within a few days, yet, thanks to its flexibility, later customized to a complex product data management solution."

**- Dr. Thilo Richter, Head of Engineering,
USK Karl Utz Sondermaschinen, Germany**

"Today, thanks to SmarTeam, everyone in our design office works in the same manner, following the same business methodology."

About Dassault Systèmes

As a world leader in 3D and Product Lifecycle Management (PLM) solutions, the Dassault Systèmes group brings value to more than 90,000 customers in 80 countries. A pioneer in the 3D software market since 1981, Dassault Systèmes develops and markets PLM application software and services that support industrial processes and provide a 3D vision of the entire lifecycle of products from conception to maintenance. The Dassault Systèmes portfolio consists of CATIA for designing the virtual product - SolidWorks for 3D mechanical design - DELMIA for virtual production - SIMULIA for virtual testing and ENOVIA for global collaborative lifecycle management, including ENOVIA VPLM, ENOVIA MatrixOne and ENOVIA SmarTeam. Dassault Systèmes is listed on the Nasdaq (DASTY) and Euronext Paris (#13065, DSY.PA) stock exchanges. For more information, visit www.3ds.com
