

# ABAQUS FOR CATIA V5 R21 DATA SHEET

## CATIA V5 INTEGRATION

### Integration Features

- Availability of linear and nonlinear static, dynamic, and thermal analysis capabilities within the CATIA V5 environment
- Complete geometric associativity
- Support for Knowledgeware, publications, and results sensors
- Model optimization using the PEO workbench
- Support for analysis assembly
- Complete support for CATIA V5 groups
- Support for many CATIA V5 advanced connections
- Visual Basic scripting capabilities for automated workflows

### Operating Systems

- Windows/x86-32 and Windows/x86-64 operating systems (Windows XP Professional SP2, Windows XP Professional x64, Windows Vista, Windows 7)

### Abaqus Workbenches

- Nonlinear Structural Analysis workbench for static, frequency-extraction, and explicit dynamic simulations
- Thermal Analysis workbench for heat transfer simulations

### Prerequisite and Corequisite Options

Abaqus for CATIA V5 is available with two different prerequisite and corequisite options:

#### Option 1 – Abaqus for CATIA V5 Complete

- Use Abaqus for CATIA V5 Complete, which does not require any analysis prerequisites or corequisites to fully enable AFC capabilities
- Abaqus for CATIA V5 Complete can be an attractive option for users who plan to focus their CATIA V5 simulation efforts on Abaqus

#### Option 2 – GPS Prerequisite

- Use Abaqus for CATIA V5 with GPS as a prerequisite, and GAS, EST, FMS, and FMD as corequisites to enable extended capabilities

## SUPPORTED FEATURES

### Materials

- CATIA-defined linear material properties
- Abaqus linear and nonlinear material properties stored in the CATMaterial document

- Temperature-dependent material properties
- Thermal properties
- Linear elasticity
- Metal plasticity (isotropic, kinematic, or Johnson-Cook hardening)
- Hyperelasticity
- Abaqus material user subroutine
- Abaqus heat generation user subroutine
- Composite properties imported from the CATIA Composite Design workbench
- Orthotropic composite layups for shell modeling
- 3-D orthotropic material properties
- Gasket material properties

### Loads

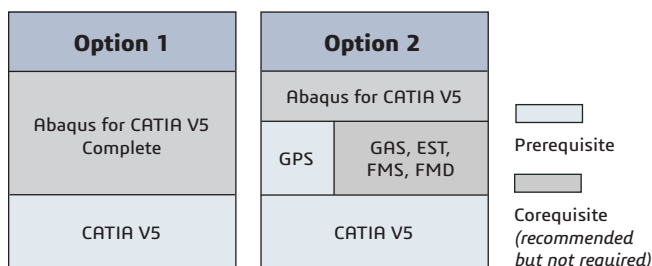

- Load application using tabular and smooth-step amplitudes
- Forces and moments can follow nodal rotation
- Data mapping available for pressure, heat flux, thermal film condition, and temperature
- Imported loads from GPS analysis
- Cartesian, cylindrical, and spherical local coordinate systems available
- Point, distributed, and force density loads
- Pressure loads
- Gravity forces (mass body forces)
- Rotational body forces
- Point, surface, and body heat fluxes
- Surface thermal film condition
- Temperature definitions

### Contact

- Contact modeling using either the “contact pair” or “general contact” approach
- “Interaction Wizard” to automatically define contact pairs
- Small- and large-sliding contact
- Friction models (penalty, user-defined, and static-kinetic exponential decay)
- Shell contact accounting for shell thickness
- Control over contact propagation from step to step
- Contact controls including automatic stabilization of rigid body modes
- Self-contact modeling
- Gap thermal conductance

### Connections

- Fully fastened connections
- Physical and virtual bolt tightening connections
- Bolt pretensioning on beams or 3D bolts that can be applied at any time in the analysis
- Rigid body constraints, including pin and tie node sets
- Analytically defined rigid surfaces
- Rigid and smooth couplings of specified degrees of freedom
- Spot, seam, and surface weld connections (mesh-dependent or mesh-independent)
- Support for CATIA point interface connections and node interface properties
- Support for CATIA point-to-point analysis

# ABAQUS FOR CATIA V5 R21 DATA SHEET

- connections and nodes-to-nodes connection properties
- Rigid and smooth connections
- Spring connections (linear and nonlinear)
- Dashpot connections (linear and nonlinear)
- Press-fit connections
- Virtual parts (smooth and rigid)
- Spring virtual parts (smooth and rigid)
- Shared nodes among separate parts (nodal equivalencing)

## Meshing

- Support for CATIA V5 line, surface (triangle and quadrilateral), and solid (tetrahedral, prism, and hexahedral) meshing
- Support for CATIA V5 linear and parabolic element types
- Abaqus shell and membrane elements
- Abaqus continuum shell elements
- Abaqus gasket elements
- Models containing mixed-dimension element types
- “Skinning” of solid bodies with membrane or shell elements
- Whole-part and part-region (local) shell and beam properties

## Analysis Steps

- Nonlinear static
- Linear static perturbation
- Riks method static steps (for handling global instabilities)
- Frequency extraction (including preloading effects)
- Explicit dynamics
- Transient heat transfer
- Steady-state heat transfer

## Geometric Nonlinearities

- Large rotations
- Large strains
- Stress stiffening

## Advanced Modeling Techniques

- Submodeling to target regions of interest for detailed stress analysis
- Cyclic symmetry modeling to analyze bodies whose sectors repeat about an axis of revolution
- Shell modeling with node offsets from the shell midplane
- Variable shell thickness using data mapping of 2-D properties
- Dedicated gasket elements to accurately model thin, flat gaskets
- Simulation continuation capabilities to enable a preloaded model to be used as the base state for subsequent simulations through the Abaqus \*Restart, read option
- Support for assembly of analysis documents

## Job Management

- Extensive model consistency checking
- Multiple case solutions in an analysis document
- Input file writing in user-selected set of units
- Single or multiple sequential job submission
- “Job type” control (syntax check, data check, continue, full model, and from input file)
- Restart file writing control
- Memory settings control
- Convenient viewing of Abaqus analysis files in a text editor (.dat, .msg, .sta, .log, and .inp)
- Monitoring of job status
- Job error and warning messages
- “Kill” function for jobs in progress
- Interactive job diagnostics to help users quickly understand and correct modeling problems
- Capability to run simulations on remote hardware

## Results Visualization

- Access to a wide range of Abaqus output variables (from Abaqus output database)
- Time history animations
- CATIA V5 cutting-plane results viewing
- Results extrema identification
- Access to Abaqus results through sensors
- Display groups for user-generated and solver-generated model regions
- Control of results output frequency
- Specification of results output variables
- X-Y data plotting through direct link to Microsoft Excel

## Documentation

- Online User’s Manual (in both HTML and PDF formats)
- Tool tips
- Context-dependent help
- References and links to Abaqus Analysis User’s Manual

## ABAQUS ANALYSIS PRODUCTS COREQUISITE

- Abaqus/Standard or Abaqus/Foundation for static and thermal simulations
- Abaqus/Explicit for explicit dynamics simulations
- Abaqus versions supported: 6.9, 6.9EF, and 6.10

## PRODUCT SUPPORT

- Maintenance and support
- Quality monitoring service
- Installation
- Training and users’ meetings

## Our 3DEXPERIENCE Platform powers our brand applications, serving 12 industries, and provides a rich portfolio of industry solution experiences.

Dassault Systèmes, the 3DEXPERIENCE Company, provides business and people with virtual universes to imagine sustainable innovations. Its world-leading solutions transform the way products are designed, produced, and supported. Dassault Systèmes’ collaborative solutions foster social innovation, expanding possibilities for the virtual world to improve the real world. The group brings value to over 170,000 customers of all sizes in all industries in more than 140 countries. For more information, visit [www.3ds.com](http://www.3ds.com).
