“When the quality of the translation counts. Count on TTI.”

## • Acc-u-Trans CATIA V5 Interface

TTI's patent pending Acc-u-Trans Interoperability Engine allows you to :

- Share 3D MCAD models seamlessly across multiple CAD platforms
- Translate fully modifiable features with feature history
- Resolve issues during translation providing every feature in the translated file and a tree that updates without error
- Verify target model accuracy through geometric and mathematical comparisons

An interoperability process consisting of 5 distinct stages

- Design intent source analyzer
- Native-to-native geometry converter
- Mirror model comparator
- Operator assisted conversion
- Final QA check
