

“driving product quality”

## • PrescientQA CAA V5

*Enables CATIA users to define and apply standards and practices for modeling and engineering design*

- Identify problems early in the design process
- Ensure consistency and conformance to the company's standards and best practices
- Enhance data interoperability throughout downstream applications
- Ensure "clean" legacy design data
- Enable high-level management overview of data including distribution of quality and financial impact

## • PrescientQA Smarteam Integration Module

*Orchestrates the activity of checking product model integrity within a formalized business process*

- PrescientQA called by workflow steps set up within SmarTeam
- PrescientQA benefits from inbuilt SmarTeam logging and reporting capabilities
