

“Simulate to Innovate”

- **SimDesigner Workbench Edition for CATIA**

A complete set of multidisciplinary analysis workbenches for V5 to perform first pass simulations, what-if scenarios, and identify design flaws earlier

- Linear static, normal modes and buckling analysis
- Nonlinear structures with contact
- Thermal-mechanical coupling and heat transfer
- Rigid and flexible mechanisms, multi-body dynamics
- Coupled motion-structures simulation
- Modal analysis with ‘differential-stiffness’ dynamic analysis and modal frequency response
- Crash and drop test (Gateway for LS-DYNA)
- Bidirectional access to MSC MD Nastran, LS-DYNA, and export to STEP AP209
- Integration with MSC SimManager for simulation data management
