

Out-Of-The-Box Enterprise PDF Conversion Integration

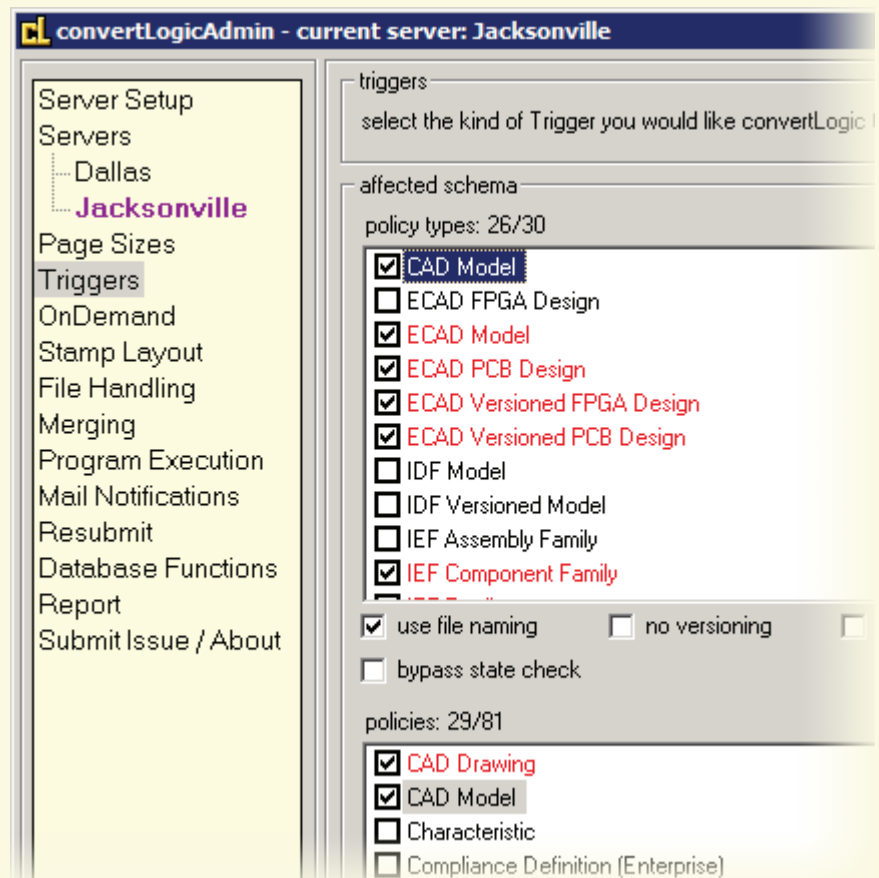

Since 2002 **convertLogic** is a proven ENOVIA integration that provides life cycled-based, high volume, high-fidelity PDF conversion across your entire Enterprise.

INTEGRATION HIGHLIGHTS

- Out-Of-The-Box Integration
- Point-n-click configuration
- Parameter management
- Solid, stable, and time-tested
- Easy to update and maintain
- No programming required
- No services required

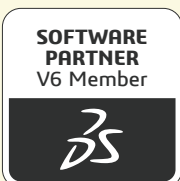

PDF CONVERSION HIGHLIGHTS

- Enforce Regulatory compliance
- Fully Searchable OCR content
- Multi-document merging
- Multiple conversion methods
- PDF/A for long term archiving
- Sophisticated proprietary stamping

Point & click configuration and administration for the entire Enterprise

INDUSTRIES: Aerospace & Defense • Marine & Offshore • Transportation & Mobility • Industrial Equipment High-Tech • Financial and Business Services • Consumer Packaged Goods & Retail • Energy, Process & Utilities Architecture, Engineering & Construction • Life Sciences • Natural Resources • Consumer Goods & Retail

Coastal Logic is a fully certified Dassault Systèmes Software Partner. Find us in the Dassault PLM MarketPlace www.PLMMarketPlace.com and in the Partners section of the 3DS website.

Flexible. Scalable. Maintainable.

convertLogic is fully integrated with ENOVIA and is designed to work out-of-the-box with all versions including 3DEXperience 2014x. No services or programming are required.

convertLogic Highlights:

Out-Of-The-Box - A standard installer is run to install and perform basic setup. Running our administrative application will connect to your database and automatically install the required schema components. Be up and running in minutes!

Standardized Maintenance and Support - An annual maintenance contract provides full product updates and upgrades regardless of the changes or versions. There is no charge if you migrate to a different version of ENOVIA. In fact, we'll even help you migrate our product and related configurations as part of the existing maintenance. Support includes installation and configuration help via phone or web with no limits.

Powerful Administrative Utility - Parameters for controlling both the ENOVIA-related behavior as well as the PDF conversions are handled from within a single administrative interface.

Bulk PDF Conversion - Convert legacy data in bulk using our simple text or CSV method. Create jobs from tools like Spinner to process thousands of documents.

Resubmission Queue - Failed conversions can be resubmitted using the original parameters.

Multiple Conversion Engines - We offer several methods to convert most document types, allowing you to determine which 'engine' provides the optimal PDF fidelity from the original data.

Windows Service - Run our integrated component as a Windows Service to increase uptime and reduce the need for administrative monitoring and overhead.

Integration Key Points:

No Services Required - Since 2002 our integration has been "services free". Installation, configuration, and tech support are part of the maintenance contract and are handled via phone, email, forum, and web meeting.

No Programming Required - Most if not all of your PDF needs can be met with simple configuration settings. You don't need a team of people to re-write our code so that it works for your environment.

Enhanced Scalability - Our server-cloning methods within our point-n-click interface means you can bring a new site online in only minutes. Sites can be linked or independent allowing for shared processing of files.

Enterprise Wide - A simple yet powerful architecture allows for servicing your entire enterprise, both MCS and FCS sites alike. Link sites around the world and process documents using consistent or divergent parameters.

Strict Privileges - Complies with existing Roles and related privileges as defined within ENOVIA.

FCS Enabled - Supports multi-site installations and leverages FCS architecture for file acquisition.

Proprietary JPOs - Our deep knowledge of ENOVIA allows to provide highly specialized JPOs for handling related actions and linking most anything to conversion.

Any Metadata - We provide the capability to retrieve virtually any metadata for use as a document stamp.

Notifications - Alert Administrators to critical issues via email and/or icon mail.

Out-Of-The-Box Enterprise Batch Printing Integration

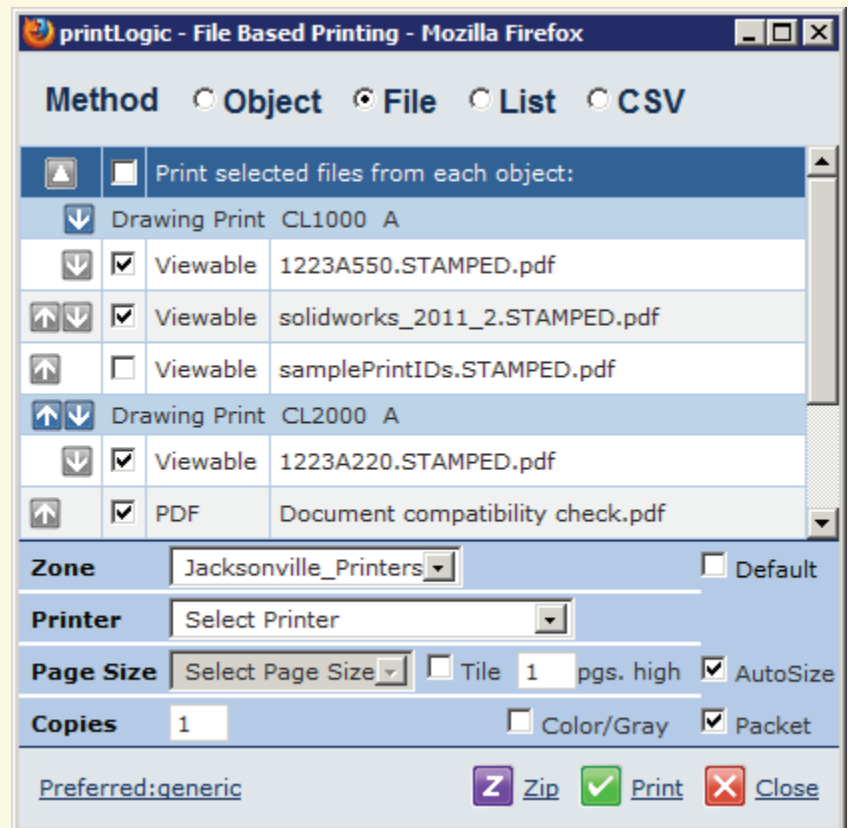

Since 2002 **printLogic** provides users with the ability to print directly from your ENOVIA database while maintaining strict administrative controlled parameters and privileges.

INTEGRATION HIGHLIGHTS

- Out-Of-The-Box Integration
- Point-n-click configuration
- Parameter management
- Solid, stable, and time-tested
- Easy to update and maintain
- No programming required
- No services required

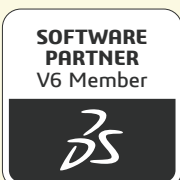

PRINTING HIGHLIGHTS

- Individual or Batch printing
- Multiple printing methods
- Access any networked printer
- Enforce Regulatory compliance
- Zip bundling of original documents
- Sophisticated proprietary stamping

*Proprietary Multi-Function
Web User Interface*

Support includes installation and configuration help via phone or web with no limits.

Powerful Administrative Utility - Parameters for controlling both the ENOVIA-related behavior as well as printing and stamping are handled from within a single administrative interface.

Robust File Types - Print hundreds of file types directly from the database in large or small batches without viewing software or the native applications.

Multiple Print Methods - Submit files for printing with any of four methods - Object, File, List Input, and CSV Batch File. Print a single document or hundreds using the same simple interface.

Related Documents - Create complex schema maps to retrieve related documents based on your own schema implementation without programming. Make changes as necessary without paying for services.

Automatic Paper Sizing - Print to specific paper sizes or have our application automatically choose.

Integration Key Points:

No Services Required - Since 2002 our integration has been "services free". Installation, configuration, and tech support are part of the maintenance contract and are handled via phone, email, forum, and web meeting.
