2.1. GENERAL RULES

Licenses for the Licensed Programs to which this OST applies may be granted according to the following licensing scheme (specifying the authorized use), as specified in the Product Portfolio if available, and as determined in the applicable Transaction Document:

- Concurrent (or floating) Based

Each Licensed Program in Concurrent Based mode requires a unique license for each concurrent use of the Licensed Program. Customer may receive a license key for each License Server which will permit access to the agreed number of concurrent uses for the Licensed Programs.

Licensed Programs may be accessed and executed by Users whose usual workplace is at the same facility as the License Server (1) on the License Server itself, and (2) on other Machines that are networked to the License Server at the same site as the License Server or are located in the same country as the License Server, as identified in the Transaction Document.

Within the parameters of the Transaction Document, Customer may from time to time designate the License Server(s) for which license keys may be provided and from which the Licensed Programs shall be available to other Machine(s) subject to the restrictions described in this OST.

It is agreed that, notwithstanding anything to the contrary provided in the Documentation, software components packaged and delivered by DS as part of a given DS Offering:

- shall solely be used together and as part of such DS Offering and
- shall not be used standalone and/or for other purposes than the ones for which such DS Offering has been marketed and granted to Customer by DS.

If a patent invention is implemented in the DS Offering for which a right to use or access is granted pursuant to the Agreement, DS hereby grants Customer a non-exclusive license on the applicable patent limited to the use of such DS Offering.
