

## INNOCEPT ENG.

INNOCEPT engineering provides high quality solutions and services for the plastics processing industry.

**“The 3DEXPERIENCE platform on cloud ensures to collaborate fast and efficient from anywhere and on any device—even with customers.”**

— Ralf Fischbach, Birgit Partheymüller, CEOs INNOCEPT engineering GmbH

### Challenge

INNOCEPT needed a unified platform enabling employees and customers to work hand in hand to foster collaboration as their demanding projects often require high coordination effort between all stakeholders. Another requirement was that the solution had to be Multi-CAD capable to support different CAD formats ensuring access from different locations to achieve transparency.

### Solution

The company selected the 3DEXPERIENCE platform on cloud as it enables to connect different CAD systems and also manage their legacy CATIA V5 data. With this, INNOCONCEPT can leverage all data for simulations and process management.

### Benefits

The unified architecture and data-driven approach helps INNOCEPT to keep projects on track and to minimize costs. Customers can easily see the results in real time and provide instant feedback for improvement and innovation. Every stakeholder has full transparency across the entire process.
