

## ELITE SHIPYARD

Elite Shipyard engineers and builds Saxdor motorboats combining innovative technology, functionality and timeless, impressive design.

**“We chose the 3DEXPERIENCE platform on cloud to realize our visions of benefiting from an enterprise solution that we can expand when needed.”**

— Michał Bendig, General Manager Elite Shipyard

### Challenge

The company needed to offer a wide range of possibilities to tailor the final product to customers' expectations and to create a unique boat with a significant advantage over competitive products. This increases engineering complexity and the need for a digital platform to better collaborate and master the different components while reducing development and production time significantly.

### Solution

The company selected the 3DEXPERIENCE® platform on cloud as it increases idea exchanges and overall communication between different departments, as well as with external stakeholders, with always up-to-date project information. The platform helps to handle the entire product development from design to manufacturing.

### Benefits

The engineering capabilities allow the development of sophisticated shapes and surfaces. High-quality, realistic photos can be generated and shared with customers at very early stages. Thanks to the cloud, Elite Shipyard benefits from an enterprise solution that is flexible and can be expanded to its needs, avoiding large IT investments — an enormous advantage for startups.
