

FFT PRODUKTIONSSYSTEME

FFT is a global solutions supplier mainly for automotive industry, but also for aerospace, white goods and other industry sectors.

“3DEXPERIENCE on cloud empowers global collaboration and users can share data instantly – without adding any IT infrastructure.”

– Jacob Kötter, Project Engineer Digital Development, FFT Produktionssysteme

Challenge

FFT embarked with a Spanish engineering company on a European research project for the aviation industry, and needed a reliable, secure and mature tool to work collaboratively with international project partners. The goal was to leverage the latest technology to ensure the final product is engineered and manufactured according to the requirements and meeting the quality criteria.

Solution

The company selected the **3DEXPERIENCE®** platform on cloud to manage and synchronize all data and communication in a single collaborative space. This helped to monitor each step of the international project efficiently and to test new technologies for welding, materials handling and control engineering.

Benefits

The **3DEXPERIENCE** platform enables efficient collaboration for all project members. Customized roles and tasks let users access their most relevant content and apps. Collaborative tasks and community dashboards keep everyone up to date – no matter when, where or the device. In addition, the platform helps adhere to FFT’s own compliance requirements along the entire supply chain.
