

VISOPRO SVERIGE

VisoPro is a Swedish consulting company focusing on the design and layout of accurate, creative and result-oriented infrastructure solutions.

“The 3DEXPERIENCE platform enables us to better master and successfully deliver our projects resulting in higher customer satisfaction.”

– Tomasz Gapinski, CEO & Founder, VisoPro

Challenge

VisoPro wanted to provide complex 3D data to project members and a wide range of customers in the industrial equipment & construction industry. The company needed a solution to increase collaboration and transparency during the design review process for all stakeholders.

Solution

VisoPro chose Dassault Systèmes' 3DEXPERIENCE® platform including CATIA to design and engineer the bridge sections and DELMIA to virtually test and improve the bridge infrastructure and simulate the entire solution.

Benefits

The digital, data-driven, model-based environment enables accurate version management and visually shows and shares bridge design and simulations with all stakeholders. The platform enables better collaboration with customers, and through project management, it helps to deliver customer expectations while meeting time and cost targets.
