

MYANDE

Leading provider of equipment and engineering in oils and fats, starch and derivatives, meal fermentation, evaporation and crystallization.

"The 3DEXPERIENCE platform helps master customization requirements while shortening the development cycle by 30% and reducing costs."

— Xu Bin, CEO, Myande

Challenge

MYANDE's customers required tailored grain and oil processing equipment and complete engineering solutions. On-demand options increased complexity and created tighter delivery times. MYANDE needed a holistic solution for accurate project control and to consider the customer's on-site environment during engineering to install, debug and deliver on-time and on-budget.

Solution

The company adopted the 3DEXPERIENCE® platform to centrally master all engineering projects and R&D data. The project management capabilities helped to accurately manage each project through a unified project template, connecting customer requirements, R&D, production and engineering delivery.

Benefits

The unified architecture and having all data in one place enabled MYANDE to manage short-term change requests coming from customers quickly and accurately during development, resulting in improved customer satisfaction. By replacing manual and file-based management with the data-driven approach, the company reduced development time by 30% and lowered costs significantly.
