

REHMUS

Rehmus develops battery-powered machinery for the agricultural, construction and municipal sectors for a more sustainable economy.

“3DEXPERIENCE on cloud enables us to efficiently master our processes and have smart collaboration with the team across sites.”

– Daniel Muench, Co-Founder, Rehmus

Challenge

The German startup developed a modular machine concept and needed a flexible solution that not only supported them during ideation and engineering, but also helped convince and inspire many stakeholders with its business idea. Spread across two sites, the company also needed a tool that ensured effective and simple cooperation and communication.

Solution

The company adopted the 3DEXPERIENCE® platform on cloud to speed up product development and integrate its legacy data for effective collaboration internally across its different sites and with external partners. The cloud offering provides the flexibility the startup needed while providing cost security and is a catalyst for recruiting new engineers.

Benefits

The platform on cloud connects various disciplines within a flexible work environment. Rehmus’ engineers and designers can drive development from anywhere on any device and stayed productive working from home during the crisis. The multi-CAD and variant management capabilities, as well as the strong simulation functionality, enhanced product validation and shortened time-to-market.
