

SOUTH GNSS

South GNSS is an industry leader providing high-precision satellite positioning application solutions.

“The **3DEXPERIENCE** platform helps us to speed up our product innovation processes and improves multi-disciplinary collaboration.”

— Huang Jingfeng, Vice President, South GNSS

Challenge

South GNSS develops high-precision satellite navigation, positioning and measurement systems for different applications. Its biggest challenge is to quickly respond to high-demand market requirements and provide reliable products with complex functionality while competition is increasing.

Solution

The company adopted the **3DEXPERIENCE**® platform to establish a unified digital environment that connects marketing, R&D and manufacturing processes for project management.

Benefits

The collaboration between R&D and manufacturing ensures the accuracy of production component data as well as accelerates the delivery of reliable, high quality products. Integrated project management, change management and BOM help South GNSS to expedite product innovation, which greatly improves customer satisfaction and increases competitiveness and market share.
